(Affiliated to GGSIP University and SCERT, Delhi)

**AWARENESS CAMPAIGN AGAINST LYMPHATIC
FILARIASIS/ELEPHENTIASIS**
(16th February 2024)

Lymphatic Filariasis is a tropical, parasitic disease that affects the lymph nodes and lymph vessels. It spreads by infected mosquitoes. Their bites deposit a parasite that travels to the lymph system. In chronic circumstances, it leads to **lymphoedema** (tissue swelling) or **elephantiasis** (skin/tissue thickening) of limbs and scrotal swelling. In this regard, IVS organized, an awareness **campaign against lymphatic filariasis/elephantiasis"** on 16th February 2024 through poster making and slogan writing under the guidance of Dr. Mandira Gupta, Principal, IVS. Ms. Sapna Rani, Ms. Megha Singh Rathore and Ms. Bilquish Khan, coordinated this awareness programme. Principal Ma'am explained about causes, symptoms and treatment of Filariasis/Elephantiasis. She also explained the different Medical Institutions engaged in research activities against the filariasis/elephantiasis. Students also discussed their queries and concerns and enriched themselves, besides preparing wonderful slogans and posters depicting the awareness about lymphatic filariasis/elephantiasis. Glimpses of the session are shown below:
