Abstract: Adolescence is that span of years during which boys and girls move from childhood to adulthood. The transition takes place mentally, emotionally, socially and physically in every adolescent. Personality of an individual plays a vital role in achieving the objectives of higher education of adaptability of the child in the society. In this study an attempt has been made to investigate the adjustment problems of high and low SES adolescent girls with focus on their personality trait of introversion and extroversion. Sample of 100 girls’ students was taken with 50 girls of high SES and 50 girls of low SES from colleges of Delhi. The tool used was Introversion Extroversion Inventory by P.F Aziz and Dr. Rekha Agnihotri. Descriptive survey method of study was followed. Scoring of the tool was done to find out the extrovert introvert and ambivert students. The study showed that there is no significant difference in introversion extroversion behavior of girls of high and low SES.
